Veterinarians

Fee Estimate for Artificial Insemination

Fresh Chilled Semen \$530.00 per cycle

Frozen Semen \$600.00 per cycle

These prices **do** include standard fertility drugs, ultrasound scans, insemination, post insemination uterine flushes and infusions and GST.

The price **does not** include agistment and variable costs such as postage, freight and handling associated with semen canister receiving and return, and frozen semen storage. The price also excludes sedation fees if required. The fee also does not include laboratory diagnostics (if required) such as uterine cultures, cytology etc. These will be discussed on an individual basis.

Agistment

Per mare per day \$28.00

Pregnancy Test \$72.00

All mares are individually paddocked in well fenced electrified grassy paddocks and fed twice a day with a combination of mitavite stu-gro pellets, lucerne chaff, and lucerne hay. Prime nutrition is paramount to achieving optimal fertility.

Mare factors such as previous conception history, age and general health are also important factors and need to be discussed on an individual basis.

It must be understood that it may take more than one cycle for mares to conceive, particularly with frozen semen. All efforts are made to maximise breeding efficiency and optimise conception rates. However, some mares will take multiple inseminations to conceive and some mares will not conceive at all. We can discuss expected conception rates, which are dependant on the stallion fertility and the mare's fertility and history.

The account rendered must be settled prior to mares being discharged from our facility.
