

FEE ESTIMATE FOR EQUINE ARTIFICIAL INSEMINATION AT COOROORA VET CLINIC

Semen costs –

- Fresh chilled semen = \$600.00 inc. GST per cycle
- Frozen semen = \$700.00 inc. GST per cycle

These prices include standard fertility drugs, ultrasound scans, insemination, and one post insemination uterine treatment and GST. Ongoing treatments will be charged in addition to this.

The price does not include agistment and variable costs such as postage, freight & handling costs associated with semen canister receiving and return, and frozen semen storage. The price also excludes sedation fees if required. The fee also does not include laboratory diagnostics (if required) such as uterine cultures, cytology etc. These will be discussed on an individual basis.

Please note that all ultrasounds post insemination are charged out an extra cost.

- Pregnancy ultrasound = \$76.10/per scan

Agistment costs –

- Dry mare = \$33.60/day
- Mare & foal = \$37.80/day

All mares are individually paddocked in well fenced electrified grassy paddocks and fed twice a day with a combination of mitavite pellets, lucerne chaff, and lucerne hay. Prime nutrition is paramount to achieving optimal fertility. Mare factors such as previous conception history, age and general health are also important factors and need to be discussed on an individual basis.

It must be understood that it may take more than one cycle for mares to conceive. All efforts are made to maximise breeding efficiency and optimise conception rates. However, some mares will take multiple inseminations to conceive and some mares will not conceive at all. We can discuss expected conception rates, which are dependent on the stallion fertility and the mare's fertility and history.

All mares must be up to date with their Hendra vaccinations prior to starting the AI process. All AI is performed at our large animal facilities.

The account rendered is to be settled prior to the mare being discharged from our facility.
